Project Evidence

Test 1: Scraping

Execute the Test Prompts: At the Query: prompt, you will run the test prompts from the README.md file and take screenshots.

Run the scrape command. Make sure your screenshot shows the command you typed and the successful "Successfully scraped 4 out of 4 websites" (or similar) output.

Query:

```
scrape these sites: {'cloudrift': 'https://www.cloudrift.ai/inference', 'deepinfra': 'https://deep
```

Output:

```
2026-03-18 19:46:04,071 - INFO - Executing read_query...
2026-03-18 19:46:12,499 - INFO - HTTP Request: POST https://claude.vocareum.com/v1/messages "HTTP/
2026-03-18 19:46:12,510 - INFO - Answered from database, no scraping needed

I cannot scrape websites as requested. However, I can provide you with the pricing information tha

## Available Pricing Data:

### **DeepInfra** (https://deepinfra.com/pricing)
- **DeepSeek-V3.2** (Newest): $0.26/$0.38 per 1M tokens (input/output)
  - Includes prompt caching at $0.13 per 1M cached input tokens
- **DeepSeek-V3.1**: $0.21/$0.79 per 1M tokens
  - Prompt caching at $0.13 per 1M cached input tokens
- **DeepSeek-V3-0324**: $0.20/$0.77 per 1M tokens
  - Prompt caching at $0.135 per 1M cached input tokens
- **DeepSeek V3**: $0.32/$0.89 per 1M tokens (160k context)

### **CloudRift AI** (https://www.cloudrift.ai/inference)
- **DeepSeek-V3.1**: $0.15/$0.50 per 1M tokens (163.84K context)
- **DeepSeek-V3**: $0.15/$0.40 per 1M tokens (163.84K context)

### **Fireworks AI** and **Groq**
No pricing data available in the current database for these providers.

**Note**: I'm an AI assistant and cannot perform web scraping. If you need updated pricing from F

# CloudRift AI vs DeepInfra: DeepSeek V3 Cost Comparison

## Standard DeepSeek V3 Pricing

| Provider | Input Tokens | Output Tokens | Total (1M in + 1M out) |
|----------|--------------|---------------|------------------------|
| **CloudRift AI** | $0.15 | $0.40 | $0.55 |
| **DeepInfra** | $0.32 | $0.89 | $1.21 |

**CloudRift AI is 54% cheaper** for the standard DeepSeek V3 model.

## Key Differences

### CloudRift AI Advantages:
- **Lower input cost**: $0.15 vs $0.32 (53% cheaper)
- **Lower output cost**: $0.40 vs $0.89 (55% cheaper)
- Slightly larger context window (163.84K vs 160K)
- Guaranteed no queues

### DeepInfra Advantages:
- **Multiple versions available** (V3, V3.1, V3.2, V3-0324)
- **Prompt caching** on newer versions (can reduce cached input token costs to $0.13)
- V3.2 is competitively priced at $0.26/$0.38

## Recommendation

- **For standard V3**: CloudRift AI offers significantly better pricing
- **For cached workloads**: DeepInfra's newer versions with prompt caching may be cost-effective
- **For latest features**: DeepInfra's V3.2 ($0.26/$0.38) is their most competitive option
```

# Cost Comparison: CloudRift AI vs DeepInfra for DeepSeek V3

## DeepSeek V3 Pricing (per 1M tokens in USD)

| Provider | Input Tokens | Output Tokens | Total (1M in + 1M out) |
|----------|-------------|---------------|------------------------|
| **CloudRift AI** | $0.15 | $0.40 | $0.55 |
| **DeepInfra** | $0.32 | $0.89 | $1.21 |

## Key Findings:

**CloudRift AI is significantly cheaper:**
- **Input tokens**: 53% less expensive ($0.15 vs $0.32)
- **Output tokens**: 55% less expensive ($0.40 vs $0.89)
- **Overall savings**: ~54% cheaper than DeepInfra

## Additional Considerations:

**CloudRift AI advantages:**
- Slightly larger context window (163.84K vs 160K)
- Enterprise deployment features
- No queues, no GPU setup required

**DeepInfra advantages:**
- Offers newer versions (V3.1, V3.2, V3-0324)
- Prompt caching support on newer versions (can reduce costs further for cached inputs)

**Bottom line:** For the standard DeepSeek V3 model, CloudRift AI offers better value with approximately half the cost of DeepInfra.
